

PD Google Shopping / Merchant Center Pro v.2.11

Advanced module which generates XML files for Google Merchant Center (Google Shopping), supported are all the required parameters in accordance with Google specification. Module allows you to create configuration files through combinations of parameters (language, country, shop, currency, delivery method).

Features and Benefits Module

- **100% accordance with official Google Merchant Center XML feed specification**
- **the ability to create their own configuration files generated by a combination of parameters** such as: (language, country, shop, currency, method of delivery) and product configuration
- **products for generated XML files can be chosen by categories in which there are assigned to**
- **store categories mapping to Google products categories (Google Taxonomy)**
- **possibility to use dictionary for products descriptions, names** (for quick replace one the fly words or phrases)
- **products can filter the by excluding** manufacturers, suppliers or individual product ID, or categories / category, or minimum price tag
- **it is possible to break up the combination of products (attributes) on single products** example. (Name Blouses - Color: Red - Size: 44) and so on.
- **ability to choose what will be used for a GTIN in the generated file for the product (EAN, UPC, Index (reference))**
- **ability to choose what is to be the number MPN** in the generated file for the product (reference number of the supplier index (reference)), or you can disable this attribute
- **supports shipping attribute** (cost, delivery method name, country ISO code) are generated for each of the products in the xml file (in addition delivery cost for all the countries that are in the same geographical zone "Zone" as the country specified when creating the configuration XML file)
- **the ability to select the description of the product** (brief description / long description) as one of the descriptions do not exist and was selected in the configuration of the module will replace other existing descriptions
- **the possibility of adding the name of the manufacturer**
- **generated are all the images for the product** (max. 11 images per products 1cover + 10 additional images)
- **all availability attribute values are supported** (in stock, unavailable, on request) to order works the way that, as we set a date when it will be available the product is available in the attribute value appears "to order"
- **supported attribute sales price (reduced) and price before reduction**
- **supported is attribute only for adults** (the ability to enable or disable it)
- **supported is attribute condition of the product** (new, used, refurbished)
- **supported is attribute type of product** (the full path of the product category)
- **supported are all the required parameters**
- **module has been written to save up server resources (CPU, memory)** to save the generated file is held every 200 products which do not need to allocate large amounts of memory in the case of very large quantities of products in the store
- **the ability to add tasks schedule to the Cron** for generate all of the files saved and active in configuration or only selected configuration ID of the file
- **the ability to enable or disable your configuration** so that it does not generate in next scheduled cron tasks on server
- **configurations list shows all the parameters set per each configuration** and additionally the date of addition and date of the last XML generation for each configuration

- **ability to disable some important configuration straight from list**
- **full support for PrestaShop Multistore functionality**
- **we can customize it to Your needs just contact with us**

Instalation

- By "Add new module" in modules tab in admin panel
- No need to change files in Your PrestaShop store !

Automatic files generation (Cron)

Links for Cron are available in module configuration page (for every id of configuration) or single link for all configurations created
